- HTML5
- CSS/SCSS
- Adobe Photoshop
- Adobe Illustrator
- JavaScript (In progress)

- Python 3
- SQL
- React (In progress)
- Works well in groups
- Capable of working independently

PROJECTS

Period Tracker January 2023 – April 2023
Created a web application for basic tracking of the menstrual cycle. Built with React.js, Express, and MongoDB. It allows a user to track when their next period will be based on the average length and cycle of their past periods and set up text alerts if wanted for 3 days before their period starts.

Toebean Sanctuary April 2022 – August 2022
Created a website based on a site from an earlier class. Built using Flask and PostgreSQL. It showcases the cats and work of a made-up cat sanctuary based loosely on the work my aunt does with wild and stray cats. The site makes use of a mix of CSS animations and GSAP for animations. It allows the user to sign up for volunteering, with the option to get a waiver sent and sign up for a monthly newsletter.
